INDIAN PHARMACOLOGICAL SOCIETY

NeuroMet Pharmacon-2027

Hosted by National Institute of Pharmaceutical Education & Research (NIPER), Raebareli at Lucknow

19–20 February 2027 | Post-conference workshop: 21 February

OFFICIAL CALL FOR ABSTRACTS & SUBMISSION GUIDELINES

1. Eligibility & General Mandate

The Scientific Program Committee invites original research abstracts spanning chemistry, pharmacology, biotechnology, and translational drug discovery, with a focus on neuro-metabolic disorders, cancer, and safety sciences. Submissions are open to faculty members, scientists, postdoctoral researchers, PhD scholars, and postgraduate students (MD/MS/M.Pharm/Pharm.D/M.Sc) from recognized academic and research institutions across India and internationally. Registration is required before submission. Verify your receipt Registration ID and registration email in the portal.

2. Structured Abstract Format (Max 300 Words)

• Title: Brief, informative, in Title Case (e.g. Mechanistic Evaluation of Targeted Therapeutics). Avoid abbreviations.

• Authors & Affiliations: Full names of all co-authors (e.g. Rahul Sharma1, Priya Verma2), departmental affiliations, institute, city, state, and pin code. Underline the Presenting Author. Provide asterisk (*) and valid email for Corresponding Author.

• Background & Rationale: Concise statement (2–3 sentences) explaining the scientific gap, therapeutic unmet need, and primary hypothesis.

• Materials & Methods: Experimental design, animal models/cell lines, pharmacological agents, dosages, analytical assays, instrumentation, or in-silico protocols. State IAEC/IEC ethics clearance number where applicable.

• Results & Discussion: Summarize primary quantitative findings with statistical significance ($p < 0.05$, mean ± SEM). Figures, graphs, and tables are NOT permitted in abstract text.

• Conclusions & Impact: Clear translational implications for drug development or clinical therapeutics.

• Keywords: 4 to 6 relevant keywords separated by semicolons.

3. Curated Thematic Scientific Tracks

TR-01: Neuropharmacology & Neurotherapeutics

TR-02: Cerebrovascular & Neuro-Metabolic Pharmacology

TR-03: Cancer Pharmacology & Neuro-Oncology

TR-04: Biotechnology & Translational Disease Models

TR-05: Medicinal Chemistry & Target Validation

TR-06: Synthetic Chemistry & Chemical Biology

TR-07: In-silico & AI-Driven Drug Design

TR-08: Pharmacovigilance-Guided Drug Repurposing & Network Pharmacology

TR-09: Indian Indigenous Systems & Ethnopharmacology

TR-10: Toxicology & Safety Pharmacology

YOUNG SCIENTIST AWARDS (AGE <= 35 YEARS)

Delegates applying for the Indian Pharmacological Society Young Scientist Award must be under 35 years as of Feb 19, 2027. Proof of age (copy of birth certificate/Aadhaar/passport) and recommendation letter from Head of Department must be uploaded during online submission.

Key Dates: Abstract Deadline: 31st December 2026 | Acceptance Notice: 15th January 2027

Official Submission Portal: https://neuro-med-pharmacon-27.vercel.app/#abstracts | Email: abstracts@niperraebareli.edu.in

[TITLE]: MOLECULAR DISSECTION OF NEUROINFLAMMATORY SIGNALING IN ISCHEMIC STROKE

Authors: Amit K. Sharma1*, Neha Rastogi1, Rajeshwar S. Verma2

1Department of Pharmacology & Toxicology, NIPER-Raebareli, Lucknow 226002, India

2Division of Neuroscience & Ageing Biology, CSIR-Central Drug Research Institute (CDRI), Lucknow 226031, India

*Corresponding Author Email: amit.sharma@niperraebareli.edu.in | Track: TR-01 (NeuroTherapeutics)

Background & Objectives:

Ischemic cerebral stroke initiates acute microglial polarization accompanied by catastrophic neurovascular breakdown. Despite recanalization therapies, post-ischemic secondary neuroinflammation remains therapeutically unaddressed. Here, we hypothesized that pharmacological inhibition of NLRP3 inflammasome priming via a novel small-molecule scaffold suppresses neurotoxic cytokines and salvages ischemic penumbral tissue.

Materials & Methods:

Adult male Sprague-Dawley rats (250–280 g, IAEC Approval # NIPER/IAEC/2026/04) were subjected to 90-minute transient middle cerebral artery occlusion (tMCAO) followed by 24h reperfusion. Vehicle or Test Agent (5, 10, 20 mg/kg i.v.) was administered at reperfusion onset. Neurological deficit scoring (mNSS), TTC cerebral infarct planimetry, blood-brain barrier permeability (Evans blue extravasation), and immunofluorescence for Iba-1/GFAP were quantified.

Results & Discussion:

Test Agent (10 mg/kg) caused a 48.6% reduction in total cerebral infarct volume compared to vehicle-treated controls ($p < 0.001$, one-way ANOVA with Dunnett's post-test). Neurological deficit scores improved significantly within 24 hours (mNSS 5.2 vs 11.8 in vehicle). Western blotting of penumbral tissue confirmed downregulation of cleaved caspase-1 and mature IL-1beta without altering systemic hemodynamics.

Conclusions:

The findings establish this novel pharmacophore as a potent, brain-penetrant neurovascular protective lead candidate capable of dampening neuroinflammation during the hyperacute reperfusion window.

Keywords: Ischemic Stroke; NLRP3 Inflammasome; Microglia; Neuroprotection; NIPER-Raebareli

Presentation Preference: [ ] Oral Presentation [ ] Poster Presentation

Apply for Young Scientist Award (Age <= 35 Years): [ ] Yes [ ] No
